WORK EXPERIENCE

VeeFriends

Software Engineer

May 2022 - June 2023

- Collaborated with designers to revamp the UI/UX of the company's website using Dotnet Blazor (Wasm with SSR), resulting in a 20% increase in user engagement. Contributed to the development of new navigation and event pages using Angular, improving site navigation by 30%.

U.S. Bank (Elavon)

Software Developer

May 2021 - May 2022

- Built and maintained merchant administration dashboard in Angular JS, Angular, and Dotnet Blazor. The dashboard gives merchants the ability to run reports, review settlements, address credit card processing rules, invoice customers, create stand-alone self-checkout pages, and manage PCI compliance and self-assessment.

Verisign

Software Engineer

October 2018 - May 2021

- Worked on Salesforce and ServiceNow modules to help support our customer support organization. Also built internal tools to manage all of our public sector clients (government). Build websites and software to provide our government clients with their own .gov registry. Used Salesforce Lightning framework and other no/low-code solutions.

Electronic Transaction Systems (ETS)

Front End Developer

July 2015 - February 2017

- Contributed to the company's Virtual Gift Card private network platform. Developed marketing webpages and built embeddable iframes and widgets for our merchants to include gift card balance checking and gifting through their websites. Primarily used Blazor, Dotnet, C#, HTML, CSS, and TypeScript.

PROJECT

Key Accomplishments at VeeFriends

- At VeeFriends, I was instrumental in building several key features that significantly improved the user experience and functionality of the website. This included the creation of the Burn Island portal and the profile management system.
- These projects were built using Razor components to create composable UI elements, and Blazor WASM with SignalR for real-time communication between the client (browser) and server. This approach allowed for a highly interactive and responsive user interface.
- Built the tile hero section on the VeeFriends homepage, enhancing the visual appeal and user experience of the site.
- Worked closely with the marketing team to implement SEO descriptions and tags for all pages, improving the site's visibility and ranking in search engine results.
- Lead the team in ensuring the website was responsive and mobile-first, optimizing the site for visitors using a variety of devices

Additional Accomplishments at VeeFriends

- My contributions at VeeFriends extended beyond the development of key features. I also played a significant role in enhancing the overall performance, usability, and analytics of the website.
- This included the creation of a responsive mobile-first top navigation, implementation of various analytics tools for logging, tracking, and user experience reviews, and code reviews for major changes to the website.
- Implemented MS Clarity, Azure Application Insights, and Google Analytics for comprehensive logging, tracking, and user experience reviews.
- Conducted code reviews for major changes to the website, including the Claim Eligibility engine, a feature that checks if a user's connected wallet meets the eligibility requirements of a particular event or experience on the website.
- Optimized slow pages to ensure a Google Lighthouse score above 94%, enhancing the site's performance and user experience.

Key Accomplishments at U.S. Bank and Elavon

- During my tenure at U.S. Bank and Elavon, I was involved in several key projects that significantly improved the functionality and security of the merchant dashboard.
- This included the development of a 508a and a11y compliant website merchant dashboard, and working with penetration testers to identify and patch potential security vulnerabilities.
- Developed a 508a and a11y compliant website merchant dashboard, ensuring the site was accessible to all users, including those with disabilities.
- Built and maintained merchant administration dashboard for U.S. Bank (Elavon Inc) using Angular JS, Angular, and Dotnet Blazor, enhancing the functionality and user experience of the dashboard.
- Worked with penetration testers to identify potential security vulnerabilities and patched them based on priority and severity levels, improving the security of the website.

Key Accomplishments at Electronic Transaction Systems (ETS)

- At Electronic Transaction Systems (ETS), I was involved in several key projects that significantly improved the functionality, accessibility, and cost-effectiveness of various platforms and tools.
- This included the development of a 508a and a11y compliant gift card marketing page, embeddable widgets/iframes, and customer internal support tools, as well as the migration from an on-premise Microsoft SQL database solution to a more cost-effective Azure Cosmos DB database.
- Developed a 508a and a11y compliant gift card marketing page, embeddable widgets/iframes, and customer internal support tools, ensuring the site was accessible to all users, including those with disabilities.
- Built software for QA teams to assist in QA automation, specifically with Playwright and Selenium, enhancing the efficiency of the QA process.
- Migrated from an expensive on-premise Microsoft SQL database solution to a more cost-effective Azure Cosmos DB database, significantly reducing costs.
- Contributed to the development of ETS's Virtual Gift Card private network platform using Blazor, Dotnet, C#, HTML, CSS, and TypeScript, enhancing the functionality and user experience of the platform.
